

Does your chair have the three T's of ergonomic seating?

Experience outstanding ergonomic benefits
with the J family of patient chairs

DentalEZ 

DentalEZ® combined the thin, narrow back and independent seat tilt of the famous “J-Chair®” with the flexibility of the split-back and added a new, sleek, modern look, anatomically correct hip pivot point and left/right flexibility to introduce the J/V-Generation® Chair.

In the past, creating more comfort for the patient usually came at the expense of the dental team, and vice-versa. However, with the J-Chair total patient placement is a reality, helping to create the most comfortable working position for both the patient and the dental team.

The revolutionary J-Chair and J/V-Generation Chair provide an ergonomically sound working environment for dental professionals who must spend long hours in the operatory.

The DentalEZ® patient chairs deliver outstanding ergonomic benefits.

DentalEZ Chairs – Back Dimension Comparison

| | | |
|----------------------|-------|------------------------------|
| J-Chair | 18" | 27.38" (including arm rests) |
| J/V-Generation Chair | 18.5" | 18.75" |

Anatomy of the chair

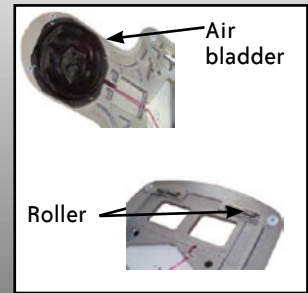

J/V-Generation Touch Pad Controls

Dual membrane controls on the J-Chair help the dental team position the patient quickly and easily.

Optional Air Glide

Chair Testimonials

“Ergonomics makes a difference in how long and how well dentists practice. DentaleZ Group’s thin, narrow back feature allows dentists to position themselves for the right ergonomic fit, allowing for ideal access to the oral cavity. This results in less strain on the dentist, while facilitating patient comfort.”

- Margaret I. Scarlett, DMD,
Science & Women’s Health Editor,
Woman Dentist Journal

“The thin, narrow back of the J/V-Generation Chair helps to alleviate neck and back strain for the dental team by facilitating proper chair-side positioning. Additionally, the tilt feature also affords an added benefit for the patient, allowing for better blood flow and increased comfort.”

- Jeff Carter, DDS,
Co-owner Practice Design Group

“The most important decision you will make is in the selection of the patient chair, and my recommendation is the DentaleZ® J-Chair. It provides the dental team with all the attributes needed to allow them to work in a comfortable, ergonomically correct posture. The thinness and narrowness of the back allow the team members to position themselves close to the patient without having to lean. The flexibility of the chair allows for optimum patient positioning, which also contributes to better posture for the dental team. In my clinical practice as an assistant and hygienist I had the good fortune to work in practices that utilized the J-Chairs and I know from personal experience that they truly are the best!”

- Mary Govoni, CDA, RDA, RDH, BS

DentaleZ, through its group of products brands, can meet all of your operatory needs with products that provide ergonomic, performance and efficiency advantages.
